

Introduction

The Instrumentation Solutions Group of Frakes Engineering, Inc. specializes in the installation, calibration and commissioning of Instrumentation. The Instrumentation Solutions Group can provide a wide range of instruments that drive, monitor, adjust, measure and monitor process operations.

About Instrumentation Services

Proper instrumentation calibration services involves providing documented proof that an Instrument has been tested and calibrated with test instruments that have been calibrated to national standards like the [National Institute of Standards and Technology](#). Our equipment is calibrated to these NIST traceable standards to insure that the instrumentation system will repeatedly and reliably do what it is supposed to do. Frakes Engineering possesses the experience and skills necessary to create all the required documentation. Our professional staff of engineers and technicians has the abilities to provide calibration services for those systems found to not be in compliance, providing the client with turnkey solutions to their Instrumentation needs.

Along with the calibration services we offer electrical installation of most instruments. This provides the customer with a single source for Instrumentation purchase, installation, and calibration.

Frakes Engineering is an INDEPENDENT Control systems provider. We are not tied to any one product. Providing the customer with the best and most cost effective product for their specific application and needs

About Frakes Engineering

Frakes Engineering, Inc. is a full service independent control system integration engineering firm, serving the automation needs of the industry since 1978. We design, build, program and implement machine and process control systems that are an integral part of your infrastructure and improvement planning. We have a team of Professional Engineers, Engineers, Microsoft Certified Professionals, and Technicians that have 175 years of collective experience. Frakes Engineering, Inc.'s typical staff member has been with us for over 7 years.

Industry Qualifications

Frakes Engineering is proud of our status as a [Microsoft Certified Partner](#).

Our focus on computer systems has also led to membership in the Authorized Reseller programs of [Hewlett-Packard and Compaq](#).

Frakes Engineering also benefits from membership in the [Control System Integrators Association \(CSIA\)](#), the largest organization of independent control system integrators in North America. We are also part of the [Automation Alliance Group, LLC](#).

How We Can Help

From envisioning a new solution, through planning, developing, and commissioning existing systems, Frakes Engineering has the experience to address your needs at any phase of a project.

Find out today how Frakes can help you get the most out of your resources and drive your manufacturing in the direction you want it to go.
